Summary

Java Developer with **1.5** years of experience in designing, developing, and implementing robust software solutions. Expertise in **Spring Boot**, **Hibernate**, **JPA**, **RESTful web services**, **MySQL**, **Microservices**. My proficiency lies in developing efficient APIs, and I am adept at understanding and translating business requirements into highly efficient and scalable software applications.

TECHNICAL SKILLS

- Languages: Java, C , JavaScript , C++
- Tools: IntelliJ IDEA, VS Code, Postman, Git, Maven, Tomcat, Docker, RabbitMQ
- Frameworks: Spring Boot, Spring Security (JWT), Spring Data JPA, Hibernate, Microservices, Swagger/OpenAPI
- Web Development: HTML, CSS, RESTful APIs
- Databases: MySQL, RedisCloud: AWS (EC2, S3)

WORK EXPERIENCE

Regis INFOTECH, Pune

November 2023 - March 2025

Java Developer

- Architected the Realtor.com project using Java, Spring Boot, Hibernate, MySQL, and AWS with MVC architecture, ensuring a scalable and maintainable codebase, and improving data retrieval speed by 30%.
- Enhanced API performance by implementing Java 8 features, Stream API, and optimized RESTful endpoints, reducing response times by 20% and improving code efficiency by 25%.
- **Designed and Implemented microservices architecture** with secure REST APIs, enabling **30**% faster inter-service communication and seamless scalability.
- Strengthened authentication and security by implementing Spring Security with JWT and SMS-based login, reducing unauthorized access attempts by 95% and login-related issues by 25%.
- Improved user experience by incorporating pagination and sorting, leading to 30% faster data retrieval and improved usability.

PROJECTS

E-commerce Backend System

GitHub

- Built a robust e-commerce backend with Spring Boot, Spring Security, JPA, MySQL, supporting user auth, product management, cart & order flows, and achieving 99%+ uptime under load.
- Engineered secure JWT-based authentication & role-based authorization, cutting unauthorized access risks by 90%+
 and ensuring end-to-end transaction safety.
- Streamlined core transaction APIs and data operations, applying indexing, query tuning, and pagination to deliver 40-50% faster response times, improving UX and reducing server load.

Tripease – Cab Booking Service

GitHub

- **Developed Tripease, a cab-booking backend** using **Spring MVC, Hibernate, MySQL**, enabling dynamic driver assignment, per-km fare computation, and real-time booking workflows with 99%+ system reliability.
- Engineered exception handling, validation & performance optimizations, introducing custom exceptions (e.g. Customer-NotFound, CabNotAvailable), input validation to reduce error rates by 40% and improve response time by 30%.

EDUCATION

B.E. in Electronics and Communication

Alvas Institute of Engineering & Technology

CGPA: 8.6

2023

ACHIEVEMENTS & CERTIFICATIONS

- Java Developer Program (AccioJob) Comprehensive training in Core Java, DSA, Spring Boot, Hibernate, MySQL, and project development with hands-on industry projects.
- Data Structures & Algorithms Completed DSA course with hands-on problem solving and coding challenges.
- LeetCode Practice Solved 100+ coding problems (currently 111), strengthening algorithmic thinking and problem-solving in arrays, recursion, and dynamic programming.
